

TRUPTI HOSPITAL ASSISTANT

Mobile User Manual

Dr. Rohini K. Patole Clinic

Version 1.0

30 July 2026

Prepared for clinic receptionists, assistants, and doctors

Revision History

Version	Date	Description	Author
1.0	30 July 2026	First release of the Mobile User Manual, covering login, dashboard, calendar, appointments, Doctor Reminder, All Appointments, printing/export and troubleshooting.	Chetan Thange

Future updates to this manual will be recorded in this table, along with the version of the application they describe.

Contact Information

If you run into a problem this manual does not answer, use the details below to get help.

Clinic Name	Dr. Rohini K. Patole Clinic

1. Introduction

1.1 Purpose of This Application

Trupti Hospital Assistant is a mobile-friendly appointment book for Dr. Rohini K. Patole Clinic. It replaces the paper appointment register with a simple digital calendar that any staff member can open on a phone, tablet, or computer browser.

The app is built around one idea: the Calendar is the single source of truth for every appointment. Everything else in the app — the dashboard numbers, the Doctor Reminder tab, the All Appointments list, and every WhatsApp message — is generated automatically from what is on the Calendar.

1.2 Who Should Use This App

- Receptionists — for booking, editing, cancelling and rescheduling patient appointments.
- Clinic assistants — for preparing the day's schedule and sending WhatsApp reminders.
- Doctors — for viewing the day's or week's appointments and patient contact details at a glance.

1.3 System Requirements

Trupti Hospital Assistant runs inside a web browser. There is nothing to install from an app store.

- A modern browser such as Chrome, Safari, or Edge (updated within the last 2 years).
- A screen of any size — the app adjusts automatically to phones, tablets, and desktop computers.
- A Google or WhatsApp account is not required to use the app, but WhatsApp must be installed on the device to send reminders and messages.

1.4 Internet Requirements

The app needs an internet connection to sign in and to save changes. A steady Wi-Fi or mobile data connection is recommended. If the connection drops briefly while you are working, the app keeps your screen usable and re-connects automatically — see Section 10.2 for details.

1.5 Supported Devices

- Android and iPhone mobile browsers.
- Tablets (Android and iPad).
- Windows and Mac desktop or laptop browsers.

NOTE — About the Screenshots in This Manual

This manual shows the app in its mobile phone layout, since that is how most clinic staff will use it day to day. The same buttons and screens appear on tablets and desktop computers, arranged slightly wider.

✓ Quick Tips

- Bookmark the app's web address on your phone's home screen so it opens like a regular app.
- Keep your phone's browser up to date for the smoothest experience.

✗ Common Mistakes to Avoid

- Assuming the app needs to be downloaded from an app store — it does not.
- Trying to use the app with no internet connection at all — a connection is needed to sign in.

★ Best Practices

- Use the same login on all clinic devices so everyone sees the same, up-to-date Calendar.
- Report any repeated errors to your clinic's app administrator (see Section 12, Contact Information).

2. Getting Started

2.1 Opening the Application

Open your phone or computer's browser and go to the web address given to you by your clinic administrator. The Login screen appears first.

Figure 2.1 The Login screen.

2.2 Logging In

- Step 1** Tap the Email box and type your clinic email address.
- Step 2** Tap the Password box and type your password.
- Step 3** Leave Remember Me ticked to stay signed in on this device.
- Step 4** Tap the "Login" button.

Figure 2.2 Email and password filled in, ready to log in.

TIP — Remember Me

Only tick Remember Me on a device that only clinic staff can access, such as the front-desk computer or your own phone.

2.3 Forgot Password

If you cannot remember your password, tap "Forgot Password?" under the Password box.

- Step 1** Tap "Forgot Password?" on the Login screen.
- Step 2** Type your clinic email address.
- Step 3** Tap "Send Reset Link".
- Step 4** Open the email and follow the link to set a new password.

Figure 2.3 The Reset Password box.

WARNING — Check Your Email Address

The reset link is only sent if the email address exactly matches a clinic staff account. Check for typos before tapping Send Reset Link.

2.4 Logging Out

To log out, tap the logout icon (a door with an arrow) at the top-right of the dashboard, next to your account icon. You will be returned to the Login screen.

NOTE — Logging Out on a Shared Device

Always log out when you finish using a shared clinic computer or tablet, so the next person cannot see or change patient appointments under your name.

✓ Quick Tips

- Save the app's web address as a browser bookmark or a home-screen shortcut for quick access.

- Use Forgot Password rather than guessing — repeated wrong attempts can lock the account temporarily.

X Common Mistakes to Avoid

- Sharing your personal password with a colleague instead of asking the administrator for their own login.
- Leaving Remember Me ticked on a public or shared computer.

★ Best Practices

- Each staff member should sign in with their own email address, not a shared one, so activity can be traced correctly.
- Log out at the end of every shift on shared devices.

3. Dashboard Overview

After logging in, you land on the Dashboard. This is the app's home screen and shows the Calendar tab by default.

Figure 3.1 The Dashboard, showing the header, stat cards, and Calendar tab.

3.2 Header Bar

The header at the top of every screen shows:

- The clinic name and logo, and ① your account email with the logout icon beside it.
- The current date and time.
- ② The dark mode toggle (a moon/sun icon) — see Section 9.1.

Figure 3.2 Header bar with account (①) and dark mode toggle (②).

3.3 Stat Cards

Just below the header, four cards summarise the clinic's workload at a glance:

- Today — number of appointments booked for today.
- Tomorrow — number of appointments booked for tomorrow.
- This Week — number of appointments in the next 7 days.
- This Month — number of appointments in the current calendar month.

Below the cards, an Upcoming Appointment banner shows the very next patient due, with their name and time.

Figure 3.3 Stat cards and the Upcoming Appointment banner.

3.4 Navigation Tabs

A row of three tabs lets you switch between the app's main screens:

- Calendar — the monthly calendar (open by default).
- ① Doctor Reminder — today's and tomorrow's appointments, ready to send to the doctor on WhatsApp.
- ② All Appointments — a searchable, filterable list of every appointment.

Figure 3.4 Navigation tabs: Doctor Reminder (①) and All Appointments (②).

✓ Quick Tips

- Check the stat cards each morning to see how busy the day and week will be.
- The Upcoming Appointment banner is a quick way to see who is due next without opening the Calendar.

✗ Common Mistakes to Avoid

- Confusing the stat cards (read-only summaries) with buttons — tapping them does nothing.
- Forgetting that Doctor Reminder and All Appointments both read from the same Calendar, so changes in one appear in the other automatically.

★ Best Practices

- Start each shift on the Dashboard to see the day's workload before diving into individual appointments.
- Use the tabs rather than the browser's back button to move between screens.

4. Patient & Appointment Information

4.1 How Patient Information Is Stored

Trupti Hospital Assistant does not keep a separate patient list or patient database. Instead, each patient's details — title, name, mobile number, and any notes — are stored together with their appointment on the Calendar. This keeps the app simple: everything about a visit is in one place.

NOTE — Finding a Patient

To find a patient, search their name in the All Appointments tab (Section 7.2). This shows every appointment on record for that patient, past and future — this is the closest thing the app has to patient history.

4.2 Viewing the Monthly Calendar

The Calendar tab shows the current month as a grid. Days with appointments show small coloured dots — one colour per appointment type — and a number badge showing how many appointments are on that day. Today's date is highlighted in purple.

- Tap the arrows beside the month name to move to the previous or next month.
- Tap "Today" to jump straight back to the current month.
- Tap any day to see that day's appointments.

Figure 4.1 Monthly calendar. Today (1) is highlighted, with dots showing appointment types.

4.3 Viewing a Day's Appointments

Tapping any date opens the Day Detail screen, listing every appointment booked for that day in time order, with each patient's name, time, and mobile number.

Figure 4.2 Day Detail screen. ① Add Appointment for This Day, and the four action icons ② WhatsApp, ③ Reschedule, ④ Edit, ⑤ Delete.

Each appointment card has four small action icons — WhatsApp, Reschedule, Edit, and Delete. These are covered in Chapter 5.

4.4 Adding a New Patient Appointment

NOTE — Where to Add an Appointment

New appointments are always added from a specific day. There is no general "+" button on the Dashboard — open the Calendar, tap a date, then tap "Add Appointment for This Day".

- Step 1** On the Calendar, tap the date of the visit.
- Step 2** Tap "Add Appointment for This Day".
- Step 3** Choose a Title (Mr., Mrs., Ms., or Miss).
- Step 4** Choose an Appointment Type from the list.
- Step 5** Type the patient's full name.
- Step 6** Type the patient's 10-digit mobile number.
- Step 7** Set the Appointment Time using the hour, minute, and AM/PM controls.
- Step 8** Type any Notes, such as a referral or special instruction (optional).
- Step 9** Tap "Save Appointment".

Add Appointment
For Thursday, July 30, 2026

Title
Ms.

Appointment Type
New Patient

Patient Name
Kavita More

Mobile Number

Appointment Time
11 : 30 AM

Notes (Optional)
First-time visit, referred by Dr. Kulkarni

Cancel

Save Appointment

Figure 4.3 Add Appointment form, filled in and ready to save.

WARNING — Double-Check the Mobile Number

The mobile number is used to send WhatsApp confirmations and reminders. A wrong digit means the message goes to the wrong person, or fails to send at all.

4.5 Finding a Patient's Appointment History

Open the All Appointments tab and search the patient's name (Section 7.2). Every matching appointment appears — including past, cancelled, and completed visits — sorted by date, so you can see the full pattern of a patient's visits to the clinic.

✓ Quick Tips

- Add appointments as soon as a patient calls, so the Calendar always reflects the true schedule.
- Use the Notes field for anything the doctor should know before the visit, such as a referral source.

✗ Common Mistakes to Avoid

- Looking for a separate "Patients" menu — there isn't one; all patient details live inside appointments.
- Typing the mobile number with spaces, dashes, or the country code, which can cause WhatsApp links to fail.

★ Best Practices

- Always double-check the spelling of the patient's name — this is what staff will search for later.
- Choose the closest matching Appointment Type, since it controls the colour on the Calendar and the WhatsApp message wording.

5. Appointment Management

Every appointment card — whether on the Day Detail screen or in All Appointments — has four action icons: WhatsApp (send a message), Reschedule, Edit, and Delete. This chapter covers editing, cancelling, rescheduling, and deleting appointments.

5.1 Editing an Appointment

- Step 1** Find the appointment on the Calendar or in All Appointments.
- Step 2** Tap the Edit icon (pencil) on the appointment card.
- Step 3** Change any field — title, type, name, mobile number, time, or notes.
- Step 4** Tap "Save Appointment".

5.2 Cancelling an Appointment

NOTE — How Cancelling Works

There is no separate "Cancel" button. To cancel, open Edit on the appointment and change the Appointment Type to "Cancelled". Saving this change asks you to confirm and give a reason.

- Step 1** Tap Edit on the appointment.
- Step 2** Change Appointment Type to "Cancelled".
- Step 3** Tap "Save Appointment".
- Step 4** Choose a reason for the cancellation from the list.
- Step 5** Tap "Cancel Appointment" to confirm.

Figure 5.1 Setting Appointment Type to Cancelled before saving.

Figure 5.2 Confirming the cancellation with a reason.

TIP — Undo

If you cancel an appointment by mistake, use the Undo option in the confirmation banner that appears immediately afterwards.

5.3 Rescheduling an Appointment

- Step 1** Tap the Reschedule icon on the appointment card.
- Step 2** Choose the new date.
- Step 3** Set the new time.
- Step 4** Choose a reason for the reschedule (optional).
- Step 5** Tap "Save" to move the appointment and notify the patient.

Figure 5.3 Reschedule Appointment screen, with new date and time set.

The appointment moves to its new date and time on the Calendar. The card keeps a note of the original date it was rescheduled from.

5.4 Deleting an Appointment

WARNING — Delete Removes the Record

Deleting removes the appointment entirely — use Cancel instead if you want to keep a record that the visit was booked and later called off.

- Step 1** Tap the Delete icon (bin) on the appointment card.
- Step 2** Read the confirmation message carefully.
- Step 3** Tap "Yes" to permanently remove it, or "Cancel" to keep it.

Figure 5.4 Delete confirmation dialogue.

TIP — Undo a Delete

Just like cancelling, a short Undo option appears after deleting, in case you tap Delete by mistake.

5.5 Marking an Appointment as Completed

There is no separate "Mark Complete" button. Once a visit is finished, open Edit on the appointment and change Appointment Type to "Completed", then save. This keeps an accurate record of which visits actually took place.

5.6 Today's, Tomorrow's and Upcoming Appointments

You do not need to open the Calendar to see what is coming up. The Dashboard stat cards (Section 3.3) and the Doctor Reminder tab (Chapter 6) both show today's and tomorrow's appointments automatically, pulled live from the Calendar.

✓ Quick Tips

- Always give a clear cancellation reason — it helps the clinic track why patients cancel over time.
- Prefer Reschedule over Delete-and-re-add — it keeps the WhatsApp message and history consistent.

X Common Mistakes to Avoid

- Deleting an appointment when Cancel would keep a more useful record.
- Forgetting that changing Appointment Type to Cancelled or Completed is how status changes are made — there is no dedicated status menu.

★ Best Practices

- Reschedule as soon as a patient calls to change their time, rather than waiting until the day of the original appointment.
- Use the Undo banner immediately if you make a mistake — it only stays available for a few seconds.

6. Doctor Reminder & WhatsApp Features

6.1 About the Doctor Reminder Tab

The Doctor Reminder tab gives the doctor a quick, read-only summary of today's and tomorrow's appointments, ready to be shared on WhatsApp in one message. This app is set up for a single doctor, Dr. Rohini K. Patole; it does not currently support adding or managing multiple doctors.

6.2 Today's and Tomorrow's Appointments

Open the Doctor Reminder tab to see two lists — Today's Appointments and Tomorrow's Appointments — each showing patient name, time, and mobile number.

Figure 6.1 Today's and Tomorrow's Appointments in the Doctor Reminder tab.

NOTE — Read-Only Lists

These lists have no Edit or Delete icons. To change an appointment, go to the Calendar or All Appointments tab — the Doctor Reminder tab always updates automatically to match.

6.3 Sending the Reminder on WhatsApp

Below the two lists, the app builds a ready-to-send message summarising every appointment for today and tomorrow, with a friendly greeting and a closing line asking whether the doctor would like any changes made.

Step 1 Open the Doctor Reminder tab.

Step 2 Review the message preview.

Step 3 Tap "Copy Message" to copy the text, or

Step 4 Tap "Send to Doctor" to open WhatsApp with the message ready to send.

Figure 6.2 WhatsApp preview with Copy Message (①) and Send to Doctor (②).

TIP — Copy Message

Use "Copy Message" if you want to paste the reminder into a different chat or app instead of sending it directly.

6.4 Appointment Confirmation Messages

When you tap the WhatsApp icon on an appointment card, the app opens WhatsApp with a ready-made confirmation message for that patient. It includes the doctor's name, the appointment date and time, the clinic location link, and a reminder to arrive 5 minutes early and bring any previous reports.

6.5 Cancellation Messages

When you cancel an appointment (Section 5.2), the app prepares a WhatsApp message telling the patient their appointment has been cancelled, including the reason you selected, and invites them to reply to book a new appointment.

6.6 Reschedule Messages

When you reschedule an appointment (Section 5.3), the WhatsApp message shows the patient both the previous appointment date/time and the new one, plus the clinic location link.

WARNING — WhatsApp Must Be Installed

Sending a message opens the WhatsApp app on the device. If WhatsApp is not installed or the patient's number is invalid, the message cannot be sent automatically — call the patient instead.

✓ Quick Tips

- Send the Doctor Reminder message first thing each morning, and again the evening before, for tomorrow's list.
- Re-check the message preview before sending — it always reflects the very latest Calendar changes.

✗ Common Mistakes to Avoid

- Manually retyping appointment details into WhatsApp instead of using the app's ready-made message.
- Forgetting that Doctor Reminder messages are for the doctor, while confirmation/cancellation/reschedule messages are for patients.

★ Best Practices

- Treat the WhatsApp message preview as the final check before anything is sent to a patient or the doctor.
- Keep the clinic's WhatsApp number active and monitored, since patients may reply to confirmation messages.

7. All Appointments (Search, Filter & Sort)

7.1 Opening All Appointments

Tap the All Appointments tab to see every appointment on record, in one scrollable list, each with its date, patient details, type, and status.

Figure 7.1 All Appointments tab, with Export CSV (①), Print Schedule (②), and the search box.

7.2 Searching by Patient Name

Step 1 Tap the "Search by name" box.

Step 2 Type all or part of the patient's name.

Step 3 The list narrows automatically as you type.

Figure 7.2 Search box with a name typed in.

This is the fastest way to see a patient's full appointment history in the app (see also Section 4.5).

7.3 Filtering by Date, Type and Status

Below the search box, four filters let you narrow the list further:

- Filter by date — show appointments on one specific date.
- Filter by type — Counselling, Follow-up, New Patient, Review, Cancelled, or Completed.
- Filter by status — Scheduled, Confirmed, Cancelled, Rescheduled, or Completed.
- Sort by time — Earliest First or Latest First.

Filters can be combined — for example, search a name and filter by Cancelled to see that patient's cancelled visits only.

7.4 Sorting Appointments

Use the "Sort by time" dropdown to switch between Earliest First (oldest/soonest at the top) and Latest First.

7.5 Clearing Filters

Step 1 Tap "Clear Filters" above the appointment list.

Step 2 The search box empties and every filter resets to All.

TIP — Start Fresh

If the list looks shorter than expected, check whether a filter or search term was left over from an earlier task — tap Clear Filters to be sure.

✓ Quick Tips

- Combine the date filter with Today's date to see the full day's list in one screen, including cancelled visits.
- Use the type filter to review all Follow-up or Review appointments for the week.

✗ Common Mistakes to Avoid

- Forgetting a filter is still active, making the list seem incomplete.
- Searching a nickname or short form that does not match how the patient's name was originally typed.

★ Best Practices

- Clear filters at the start of each new task to avoid confusion.
- Use All Appointments, not the Calendar, when you need to search across many months at once.

8. Printing & Export

The "Export & Print" section at the top of the All Appointments tab lets you export a date range of appointments to a spreadsheet file, or print a paper schedule.

8.1 Exporting to CSV

A CSV file can be opened in Excel or Google Sheets — useful for record-keeping or sharing appointment data outside the app.

- Step 1** Tap "Export CSV" in the All Appointments tab.
- Step 2** Choose the From Date.
- Step 3** Choose the To Date.
- Step 4** Optionally set an Appointment Status or Type filter.
- Step 5** Tap "Export" to download the CSV file.

Figure 8.1 Export CSV screen with a date range set.

NOTE — Where the File Goes

The CSV file downloads to the device's usual Downloads folder, the same as any other file downloaded from a browser.

8.2 Printing a Schedule

Step 1 Tap "Print Schedule" in the All Appointments tab.

Step 2 Choose the From Date and To Date.

Step 3 Optionally set a Status or Type filter.

Step 4 Tap "Preview" to check the layout, or "Print" to print directly.

Figure 8.2 Print Schedule screen with Preview (①) and Print (②) buttons.

8.3 Print Preview

Print Preview shows exactly how the printed page will look — clinic name, the date range, and a table of every matching appointment with date, time, patient, mobile, type, and status.

Figure 8.3 Print Preview of the schedule report, with the Print button (①).

TIP — Check Before Printing

Always check Print Preview first, especially for long date ranges, to avoid wasting paper on an empty or overly long report.

✓ Quick Tips

- Export a monthly CSV at the end of each month for the clinic's own records.
- Print a single day's schedule each morning as a paper backup for the reception desk.

✗ Common Mistakes to Avoid

- Choosing a To Date earlier than the From Date, which returns an empty report.
- Printing a very wide date range without checking Preview first.

★ Best Practices

- Keep printed schedules only as long as needed, and dispose of them securely since they contain patient names and phone numbers.

- Use the Status filter to print only Scheduled/Confirmed visits, leaving out cancelled ones, when handing a list to the doctor.

9. Account & Preferences

9.1 Switching Dark Mode On or Off

Dark Mode changes the app's colours to a darker palette, which can be easier on the eyes in low light.

Step 1 Tap the moon/sun icon at the top-right of the header.

Step 2 The app switches instantly between light and dark colours.

Step 3 Tap the icon again to switch back.

Figure 9.1 Dashboard shown in Dark Mode. Tap the same icon (①) to switch back.

9.2 Your Profile & Logging Out

Your signed-in email address is shown at the top of the dashboard, next to the logout icon. Tap the logout icon at any time to sign out — see Section 2.4 for details.

9.3 What This Version Does Not Include Yet

NOTE — Honest Notice

To avoid confusion, this section lists clinic-management features that some staff may expect but that are not part of this version of the app.

- There is no Settings screen for editing the clinic's name, address, or logo from within the app.
- There is no Backup or Restore button — appointment data is stored securely online and does not need a manual backup.
- There is no screen for managing multiple doctors or their working hours — the app is built around a single doctor's schedule.
- There is no separate Patient Management screen — see Section 4.1 for how patient details are stored instead.

If your clinic needs any of these features, please raise the request with your app administrator or developer — see Contact Information at the front of this manual.

✓ Quick Tips

- Use Dark Mode in the evening or in a dim consultation room to reduce eye strain.
- Keep your login email up to date with your clinic administrator in case a password reset is ever needed.

✗ Common Mistakes to Avoid

- Looking for a Settings menu that does not exist in this version.
- Assuming appointment data needs a manual backup — it is already saved securely as you work.

★ Best Practices

- Note down any feature requests (such as multi-doctor support) and share them with your app administrator collectively, rather than individually.

10. Troubleshooting

10.1 Login Issues

Problem	What To Do
I can't remember my password.	Tap "Forgot Password?" on the Login screen and follow Section 2.3.
I typed my password correctly but Login fails.	Check Caps Lock is off and there are no extra spaces before or after the password.
The app signs me out on its own.	Make sure "Remember Me" was ticked when you last logged in, and that you are using the same device and browser.

10.2 Internet Issues

Problem	What To Do
The app feels frozen or slow.	Check the device has a working Wi-Fi or mobile data connection, then refresh the page.
Changes don't seem to save.	Confirm the internet connection before making changes — the app needs a connection to save data.
The Calendar looks empty on a new device.	Wait a few seconds after logging in for appointments to load, especially on a slower connection.

10.3 Sync Issues

Problem	What To Do
A colleague added an appointment I can't see.	Refresh the browser page — the Calendar updates automatically, but a manual refresh never hurts.
Two staff edited the same appointment at once.	The most recently saved change is kept. Confirm details with your colleague if this happens.

10.4 Printing Issues

Problem	What To Do
Nothing happens when I tap Print.	Check the device is connected to a printer, or use Export CSV instead and print from a computer.
The printed schedule is empty.	Check the From Date and To Date — an empty report usually means no appointments matched that range or filter.

10.5 WhatsApp Issues

Problem	What To Do
Tapping the WhatsApp icon does nothing.	Make sure WhatsApp is installed on the device being used.
The message opens but the number looks wrong.	Edit the appointment (Section 5.1) and correct the patient's mobile number, then try again.
The doctor didn't receive the reminder.	Confirm you tapped "Send to Doctor" (not just "Copy Message") and that the message actually sent inside WhatsApp.

NOTE — Still Stuck?

If a problem is not listed here, contact your app administrator using the details on the Contact Information page at the front of this manual.

11. Frequently Asked Questions

The answers below cover the most common questions clinic staff ask about Trupti Hospital Assistant.

Q1. Do I need to install anything to use this app?

No. Trupti Hospital Assistant runs in your phone or computer's web browser — there is nothing to download from an app store.

Q2. Can I use the app on more than one device?

Yes. Log in with the same email on as many clinic devices as needed — the Calendar stays the same everywhere.

Q3. What happens if I forget my password?

Tap "Forgot Password?" on the Login screen and follow the emailed reset link (Section 2.3).

Q4. Is there a separate screen for patient records?

No. Patient details (title, name, mobile, notes) are stored inside each appointment — see Section 4.1.

Q5. How do I see a patient's full visit history?

Search their name in the All Appointments tab (Section 7.2) to see every appointment on record for them.

Q6. Where do I add a new appointment?

Open the Calendar, tap the date, then tap "Add Appointment for This Day" (Section 4.4).

Q7. Can I add an appointment from the All Appointments tab?

No — new appointments are always added from a specific date on the Calendar.

Q8. How do I cancel an appointment?

Edit the appointment, change Appointment Type to "Cancelled", save, then confirm with a reason (Section 5.2).

Q9. How is cancelling different from deleting?

Cancelling keeps a record of the visit and notifies the patient; deleting removes the appointment completely.

Q10. Can I undo a cancellation or deletion?

Yes, briefly. An Undo option appears right after the action — use it quickly, before it disappears.

Q11. How do I mark a visit as completed?

Edit the appointment and change Appointment Type to "Completed" (Section 5.5).

Q12. How do I reschedule an appointment?

Tap the Reschedule icon on the appointment card, set a new date and time, and save (Section 5.3).

Q13. Does the patient get notified automatically when I reschedule?

The app opens a ready-made WhatsApp message for you to send — it is not sent automatically without you tapping Send.

Q14. What is the Doctor Reminder tab for?

It shows today's and tomorrow's appointments and prepares one WhatsApp summary message for the doctor (Chapter 6).

Q15. Can I copy the Doctor Reminder message instead of sending it directly?

Yes — tap "Copy Message" instead of "Send to Doctor".

Q16. Does the app support more than one doctor?

Not in this version — it is built around a single doctor's schedule.

Q17. How do I search for a specific patient?

Open All Appointments and type their name in the "Search by name" box (Section 7.2).

Q18. Can I filter appointments by status or type?

Yes — All Appointments has filters for date, type, and status, plus a sort order (Section 7.3).

Q19. How do I export appointments to a spreadsheet?

Tap "Export CSV" in All Appointments, choose a date range, and export (Section 8.1).

Q20. How do I print the day's schedule?

Tap "Print Schedule" in All Appointments, set the date range, preview, then print (Section 8.2).

Q21. Why is my printed schedule blank?

Check the From Date and To Date — they likely do not match any appointments.

Q22. What does Dark Mode do?

It switches the app to a darker colour scheme for easier viewing in low light (Section 9.1).

Q23. Can I edit the clinic's name or logo in the app?

Not in this version — there is no Settings screen yet (Section 9.3).

Q24. Do I need to back up my appointment data?

No — appointments are stored securely online automatically; there is no manual backup step.

Q25. What happens if the internet disconnects while I'm using the app?

The app will reconnect automatically once the connection returns; avoid making changes while offline (Section 10.2).

Q26. Why can't I send a WhatsApp message from the app?

Check that WhatsApp is installed on the device and that the patient's mobile number was entered correctly (Section 10.5).

Q27. Can more than one staff member use the app at the same time?

Yes — everyone sees the same live Calendar, so changes made by one person appear for everyone else.

Q28. Who do I contact if something in the app isn't working?

See the Contact Information page at the front of this manual.

12. Glossary of Terms

This manual uses the app's own on-screen wording throughout. The short glossary below collects the key terms in one place.

Term	Meaning
Appointment Type	The category chosen for a visit: Counselling, Follow-up, New Patient, Review, Cancelled, or Completed. Controls the Calendar dot colour.
Day Detail	The screen that opens when you tap a date on the Calendar, listing that day's appointments.
Doctor Reminder	The tab that summarises today's and tomorrow's appointments for the doctor, with a ready-made WhatsApp message.
All Appointments	The tab listing every appointment on record, with search, filter, and sort tools.
Status	The current state of an appointment: Scheduled, Confirmed, Cancelled, Rescheduled, or Completed.
Stat Cards	The four summary numbers (Today, Tomorrow, This Week, This Month) on the Dashboard.
Undo	A short-lived option shown right after cancelling or deleting an appointment, letting you reverse the action.
CSV	A spreadsheet file format (Comma-Separated Values) that Excel and Google Sheets can open, produced by Export CSV.
